

CUSTOM-CARE FINISH®

Bead Fabric Finish

Gives "New Life" to Fabrics™

Give garments new vitality and keep your customers coming back.

Bead Fabric Finish

Customers notice detail. And when the look and texture of their garments is improved, you can be sure they'll appreciate it.

CUSTOM-CARE FINISH will restore limp, lifeless garments to that "just bought" look and feel. Custom-Care Finish contains a special formula which, when added to solvent, restores the vibrance to textiles that can be lost through wear and repeated cleanings. The result is not only a better looking garment, but one that resists wrinkling and holds its press longer.

CUSTOM-CARE FINISH not only revitalizes all drycleanable fabrics, all year around, it shortens finishing time. Custom-Care Finish should be an important part of your process to provide a noticeable difference to your customers.

- **Restores Garments to "Like New" Condition**

Wear and repeated cleanings remove the original finishes that give new clothes their special qualities. CUSTOM-CARE FINISH restores garments to their original look and feel, reflecting the high quality of your work.

- **Helps Garments Resist Wrinkling**

CUSTOM-CARE FINISH protects garments after they leave your plant. They will resist wrinkling due to handling, crowding on racks, or in your customer's closet.

- **Everything You Clean Will Benefit**

Regardless of whether a garment's style calls for a gently rolling lapel, a crisp pleat, sharp crease, or the soft drape of a puffed sleeve, Custom-Care Finish gives garments the right look. CUSTOM-CARE FINISH is effective on all textiles - synthetics, natural fibers and blends.

- **Shortens Finishing Time**

Pressing is faster because it's easier to restore the original look to garments.

- **Makes Spotting Easier**

Garments treated with CUSTOM-CARE FINISH are easier to spot. The protective coating provided by CUSTOM-CARE FINISH helps prevent stains and spots from becoming set while being worn by the consumer prior to drycleaning.

Instructions for using CUSTOM-CARE FINISH®

Restore limp, lifeless garments to their original look and feel.

What Does CUSTOM-CARE FINISH Do?

When added in the proper concentration, CUSTOM-CARE FINISH improves the look and texture of all drycleanable fabrics, restoring garments to their original look and feel.

What Affects the Results?

The most important factor affecting fabric finish performance is the use concentration, or “charge”, of CUSTOM-CARE FINISH added to the working solvent. The correct charge causes a noticeable effect. A lower concentration may not be noticeable at all and be of little or no benefit.

In addition to the charge concentration, the amount of CUSTOM-CARE FINISH left in the clothes is affected by extraction efficiency. Because many machines have different wash wheel diameters and different extraction speeds, the amount of solvent (and CUSTOM-CARE FINISH) retained in clothes at the end of the cycle can vary. Therefore, you will want to adjust the charge concentration to suit the needs of your system.

How Do You Know When You Have Used Enough?

You know you have used enough CUSTOM-CARE FINISH when it becomes easier to finish garments and when they are restored to their “like-new” shape and feel. In addition, the look and texture of garments should noticeably improve and clearly be more wrinkle resistant.

Start with a concentration of 1-1/2 ounces per gallon, and increase or decrease it as necessary to achieve the best look and feel. For most plants, the ideal concentration will be found between one and two ounces per gallon of solvent.

How to Maintain the Concentration

Restore the CUSTOM-CARE FINISH concentration whenever new, distilled or reclaimed solvent is added to the working tank. The amount of addition is determined from the table based on the desired concentration and amount of solvent added.

Desired CCF Concentration	Rate of CCF Addition
1 oz. per gallon	1 measure CCF per 10 gallons of working solvent
1.5 oz. per gallon	1-1/2 measures CCF per 10 gallons of working solvent
2 oz. per gallon	2 measures CCF per 10 gallons of working solvent

How to Maintain the Concentration Using a Test Kit

Desired CCF Concentration	CCF Charge	
	1-1/3%*	2%**
1 oz. per gallon	1 measure CCF per 17 oz. of detergent	1 measure CCF per 26 oz. of detergent
1.5 oz. per gallon	1-1/2 measures CCF per 17 oz. of detergent	1 measure CCF per 26 oz. of detergent
2 oz. per gallon	2 measures CCF per 17 oz. of detergent	1 measure CCF per 26 oz. of detergent

How to Order CUSTOM-CARE FINISH

CUSTOM-CARE FINISH is available from authorized Street's distributors everywhere in 50 lb. and 100 lb. drums, and 10 lb. boxes..

Before using any chemical product, review the Safety Data Sheet (SDS) for safe handling and proper disposal.

For professional drycleaning use only.
